

# ExxonMobil

**Project: Polypropylene Growth Project**

**Location: Baton Rouge, LA**

**Owner: ExxonMobil**

**Contractor: Turner Industries**

**MEIS Support/Supplies: April 2022 through July 2022**

- The unit increases polypropylene production capacity along the Gulf Coast by 450,000 metric tons per year, meeting growing demand for high-performance, lightweight and durable plastics, particularly for automotive parts that can improve fuel efficiency and reduce vehicle emissions. Polypropylene, a polymer with several applications, is also used to improve the safety and efficiency of everyday products like medical masks and food packaging.
- The total capital investment was more than \$500 million. ExxonMobil's extensive mega-project management experience and unrivaled technology capability enabled the unit to start up according to planned cost and schedule.
- ExxonMobil's integrated operations in Baton Rouge include a more than 500,000 barrel-per-day refinery, as well as chemical, lubricants, polyolefins and plastics manufacturing.
